Magnetic boiler filter is a water purification device specially designed for boiler system. It uses a strong magnetic field to effectively absorb and remove magnetic impurities such as rust and metal particles in water, thereby protecting the boiler system from these impurities. If these impurities exist in the boiler for a long time, they will not only reduce the thermal efficiency, but also may cause system blockage, corrosion and other problems. The magnetic boiler filter achieves efficient purification of water quality through its unique magnetic filter medium, ensuring the stable operation of the boiler system. In addition, the device is also easy to clean and maintain, which greatly improves the convenience of use.

United States market for Magnetic Boiler Filter is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
