## Abstracts

The global Magnetic Colloid market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The magnetic colloid is a composite material composed of magnetic particles and the liquid suspension medium. It is a material that suspends micron or even nanometer-sized magnetic particles in colloids and makes them form a stable suspension state.

The magnetism of magnetic colloids comes from the magnetic particles in them, which are usually made of iron, nickel, cobalt and other materials. In a suspended medium, these magnetic particles can spontaneously form a collective motion of spins, known as magnetic anisotropy, forming a state similar to that of a magnetic liquid. Magnetic colloids have the characteristics of controllability, fast magnetic response, good corrosion resistance, and wide application.
