The global Magnetic Components of Charging Station market size is predicted to grow from US\$ 1200 million in 2025 to US\$ 3304 million in 2032; it is expected to grow at a CAGR of 15.7% from 2026 to 2032.

Magnetic Components of Charging Station refer to electromagnetic devices such as inductors, transformers, and chokes that are integrated within the power conversion system of EV chargers to enable efficient energy transfer, voltage transformation, current regulation, and noise suppression, forming the essential functional backbone that converts grid electricity into stable and controlled power suitable for charging electric vehicle batteries. The unit price of magnetic components for charging stations is typically in the tens of dollars, with industry gross margins ranging from 20% to 35%.

The upstream supply chain of magnetic components for charging stations consists primarily of raw material suppliers providing copper wire, ferrite and other magnetic core materials, insulating materials, and precision processing equipment, which are then utilized by magnetic component manufacturers to design and produce inductors, transformers, and related devices, while the downstream includes power module integrators and EV charger manufacturers who incorporate these components into AC-DC and DC-DC conversion systems, ultimately delivering complete charging equipment to infrastructure operators such as public charging networks, commercial fleets, and residential installations, linking the magnetic component industry directly to the broader electric vehicle and energy ecosystem.

United States market for Magnetic Components of Charging Station is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Magnetic Components of Charging Station is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
