The global Magnetic Disk Substrates for Hard Disk Drive market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Hard disks are rigid platters, composed of a substrate and a magnetic medium. The substrate – the platter's base material – must be non-magnetic and capable of being machined to a smooth finish. It is made either of aluminum alloy or a mixture of glass and ceramic. To allow data storage, both sides of each platter are coated with a magnetic medium – formerly magnetic oxide, but now, almost exclusively, a layer of metal called a thin-film medium. This stores data in magnetic patterns, with each platter capable of storing a billion or so bits per square inch (bpsi) of platter surface.

According to Trendfocus analysts, the volume of the global hard drive market in 2022 decreased by 40-40.5% and amounted to 35.2-36.4 million devices. At the same time, all market leaders suffered, albeit in different ways.

The decline of the HHD market will also have an impact on the hard disk substrates market. With the increase of the single disk capacity of the substrates and the increase of the Market penetration of the glass substrates, the market will usher in greater changes.
