The global Magnetic Fluid Generators market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

MFGs are considered an innovative and emerging technology for converting fluid motion (e.g., ocean currents, tides, hot fluid flows) directly into electricity through the interaction of magnetic fields with a conductive fluid. They were being explored as a potential alternative or complement to other renewable energy sources.

MFGs offer advantages such as low maintenance requirements (due to fewer moving parts) and potentially long operational lifespans. However, challenges related to system efficiency, scalability, and the choice of conductive fluids remained to be addressed.
