The global Magnetic Levitation Blowers and Air Suspension Blowers market size is predicted to grow from US\$ 646 million in 2025 to US\$ 936 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

Magnetic levitation blowers and air suspension blowers are typically high-speed, single-stage centrifugal turbo blowers; magnetic-bearing designs use active magnetic bearings to levitate the rotor without contact, while air-suspension designs commonly rely on air-foil bearings that form a hydrodynamic air film at operating speed, and both architectures enable oil-free operation, compact direct drive with VFD control, and low vibration/noise for aeration and other low-pressure process air duties. In 2025, Global Magnetic Levitation Blowers and Air Suspension Blowers sales is estimated at 12,000 units, with an average ex-works price of 55,000 US\$/unit. And global capacity is about 16,000 units/year, with a gross margin range of 22%–38%.

Upstream covers high-speed motors/VFDs, magnetic or air-foil bearings, impellers and precision machined parts plus sensors/control electronics; OEMs integrate aerodynamics, rotor-bearing systems and controls into packaged blower skids; downstream demand comes via water/wastewater projects and industrial EPC/system integrators for aeration and low-pressure process air.
