Magnetic Levitation Conveyor Line Systems is a technology that uses electromagnetic force to levitate and transport objects. This system uses the electromagnetic field to levitate objects, thereby reducing friction and achieving efficient and smooth transportation. It creates a magnetic field by arranging electromagnets on the track to levitate vehicles (such as skateboards, pallets, etc.), and propels the vehicle forward or stops by changing the magnetic field. Magnetic levitation technology is not only used in high-speed trains, but can also be used for material transportation in a variety of scenarios such as industrial production lines and logistics warehouses.
