Magnetic Levitation Material Handling System is a material conveying and handling system based on magnetic levitation technology. It uses magnetic field force to enable non-contact and wear-free suspension of materials on pipelines or guide rails, thereby achieving efficient and energy-saving material handling.

The system is mainly composed of a magnetic levitation device, a conveying pipeline (or guide rail) and a control unit. The magnetic levitation device is the core part, responsible for generating a magnetic field to suspend materials; the conveying pipeline (or guide rail) is responsible for the movement of materials; and the control unit monitors and adjusts the entire system to ensure the stable operation of the system.

United States market for Magnetic Levitation Material Handling System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
