The global Magnetic Powder market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Magnetic powder consists of fine particles of ferromagnetic materials, which exhibit strong magnetic properties. These powders are used in a variety of applications, leveraging their magnetic characteristics for different purposes.

Soft powder is an alloy powder material that can quickly respond to changes in the external magnetic field and obtain high magnetic induction with low loss. It is one of the core raw materials for making soft magnetic materials. The soft magnetic material made of soft magnetic powder can be easily magnetized and demagnetized under a lower magnetic field, and has magnetic properties such as low coercive force and high magnetic permeability, low magnetic loss and electrical loss, and high stability.

Global key players of Soft Magnetic Powder include POCO Magnetic, ZheJiang NBTM KeDa (KDM) and CSC (Changsung Corp.), etc. The top three players hold a share over 40%. China is the largest producer, has a share about 50%. In terms of product type, Sendust is the largest segment, occupied for a share of about 35%, and in terms of application, Photovoltaics and Wind Power has a share about 38 percent.
