The global Magnetic Recording Material market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Magnetic recording materials refer to magnetic materials that utilize their magnetic properties and effects to input, record, store, and output information such as images and numbers. Divided into magnetic recording medium materials and magnetic head materials. The former mainly completes the recording and storage functions of information, while the latter mainly completes the writing and reading functions of information. According to their morphology, they are divided into two types: granular and continuous thin film materials, and according to their properties, they are further divided into metallic and non-metallic materials. The widely used magnetic recording medium at present is the γ -Fe₂O₃ series material, and commonly used magnetic head materials include alloy magnetic head materials, ferrite magnetic head materials, amorphous magnetic head materials, etc. They are widely used in broadcasting, film, television, education, medical care, automatic control, geological exploration, electronic computing technology, military, aerospace, and daily life.

United States market for Magnetic Recording Material is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
