The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Magnetic roll separator is a roll type dry magnetic separator with fixed magnet having high field intense and gradient. The magnets used in the magnetic roll separators and made of alloys of rare earth elements are more powerful as compared to other magnets. Magnetic roll separators generate high attraction forces on the magnetic roll due to their properties and special magnetic series. The obtained high magnetic attraction forces have low magnetic sensitivity and therefore they make it possible to separate very fine low magnetic minerals with a high recovery. The most distinguishing property of magnetic roll separator is the used magnets that are an alloy of rare earth elements produced domestically and more powerful. Magnetic systems has a number of standard sizes in which the high gradient separator is produced, and all of these sizes only require a low installation height. It is also possible to make a system in accordance with customer specifications. Depending on the requirements made and the application, a choice can be made for a single stage system or for multiple magnet rolls under one another. This results in an even higher degree of iron separation.
