The global Magnetic Sensitive Pulse Intelligent Water Meter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The dual Hall sensors are used to measure the rotation of the magnetic steel pointer on the modified mechanical water meter using the principle of magnetic induction. The magnetic induction principle converts the rotation of the magnetic steel pointer into a pulse signal, and the number of pulse signals is recorded by the data collector, which is finally converted into water consumption data. The pulse principle records the accumulated pulse signals within a period of time, so continuous power supply is required.
