A hybrid electric vehicle (HEV) magnetic sensor is a type of sensor used in hybrid electric vehicles (HEV) to provide data or signals by sensing changes in the magnetic field. They are usually based on the Hall effect or magnetoresistive effect and detect rotational speed, position, speed or angle through changes in the magnetic field and transmit this data to the vehicle's electronic control unit (ECU). In hybrid vehicles, magnetic sensors are used to monitor power switching between the internal combustion engine and the electric motor, state of charge, battery management, vehicle stability control, and many other aspects.
