The global Magnetic Suspension Centrifugal Fan market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Magnetic levitation centrifugal fan, also known as magnetic levitation centrifugal blower, is a mechanical equipment for conveying gas made of core technologies and components such as intelligent monitoring and control, magnetic levitation bearing, high-speed permanent magnet synchronous motor, and three-dimensional flow impeller. Compared with traditional fans, magnetic levitation centrifugal fans have the advantages of easy installation and maintenance, low noise, remote monitoring, high work efficiency, and environmental protection. They are widely used in sewage treatment, aquaculture, material gas transportation, textiles, papermaking and other fields.

The magnetic levitation centrifugal fan is developed and designed based on foreign advanced magnetic levitation technology. It is the fan of choice for customers in the double carbon era to save energy and reduce consumption. It is one of the most advanced centrifugal fans in the world. When the fan is started, it is suspended first and then rotated. It is an active suspension, no friction, no lubrication, the three-dimensional flow impeller is directly connected to the rotor, and the transmission is zero loss. It is a high-tech green energy-saving and environmental protection product. The product has the advantages of super energy saving, super high efficiency, environmental protection and low noise, precise structure, long life, carbon reduction and cost reduction.
