The global Magnetically Coupled Rodless Cylinder market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Magnetically Coupled Rodless Cylinder refers to the cylinder that uses the piston to connect the external actuator directly or indirectly, and makes it follow the piston to realize reciprocating motion. The biggest advantage of this type of cylinder is that it saves installation space. A set of permanent magnetic rings with high strength magnetism is installed on the piston. The magnetic force line acts on another set of magnetic rings inside the outer slide block through the thin wall cylinder. Since the two sets of magnetic rings are opposite, they have a strong mutual suction force. When the piston is pushed by air pressure in the cylinder, the piston moves. At the same time, the magnetic ring in the external slider is affected by the magnetic force line of the magnetic ring on the piston and moves synchronously.

United States market for Magnetically Coupled Rodless Cylinder is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
