The magneto-electric positioning pressure monitoring ablation catheter is a radiofrequency ablation catheter that integrates magnetic positioning technology and pressure monitoring functions. It uses magnetic field positioning technology to determine the precise position of the catheter in the heart, and monitors the contact pressure between the catheter tip and the heart tissue in real time through a pressure sensor. This catheter is usually used in conjunction with a radiofrequency ablation device and a three-dimensional electrophysiological mapping system to achieve accurate cardiac electrophysiological mapping and ablation therapy.
