## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The global Magnetron market size is predicted to grow from US\$ 1523 million in 2025 to US\$ 1769 million in 2031; it is expected to grow at a CAGR of 2.5% from 2025 to 2031.

A magnetron is a device that uses the interaction of a stream of electrons, guided by a magnetic field, with cavities within a block of copper to produce microwave radiation. The frequency range of the radiation depends on the size of the cavities. The devices are used in radar, and microwave ovens, where the radiation causes the molecules in food — particularly water molecules — to vibrate, leading to a rapid rise in temperature that is sufficient to cook the food.

Global magnetron key players include LG, GTOSHIBA, E2V, etc. Global top 3 manufacturers hold a share about 45%.

Asia Pacific is the largest market, with a share about 77%, followed by North America and Europe, both have a share about 20 percent. In terms of product, continuous magnetrons is the largest segment, with a share over 90%. And in terms of application, the largest application is home microwave Oven, followed by drying/heating.
