The global Mahogany market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Mahogany is a valuable hardwood that comes from the wood of the mahogany tree. This tree is mainly distributed in tropical regions, such as Central America, South America and Africa. Its wood has elegant appearance and excellent performance, so it is widely used in furniture manufacturing and decoration.

As a high-end hardwood material, Mahogany has a wide range of applications in furniture manufacturing, interior decoration and handicraft production. Rising consumer demand for high-quality, long-lasting products with unique aesthetics is driving the demand in the Mahogany market. In addition, Mahogany is also regarded as a luxury material, so it also has a certain market share in the luxury market. Mahogany is a scarce resource, mainly produced in Asia, Africa, Central and South America and other regions. The supply of Mahogany is relatively limited due to the long growing cycle and environmental protection considerations. Several countries and regions have restricted and regulated the logging and export of Mahogany to protect this valuable resource. Therefore, the supply of Mahogany is somewhat limited, resulting in relatively high prices on the market.
