Maifan stone balls are spherical pellets made from Maifan stone, a mineral-rich natural rock known for its ability to release essential trace elements such as calcium, magnesium, and iron while adsorbing harmful substances like heavy metals and chlorine. Commonly used in water purification systems, aquariums, and health-related applications, these balls improve water quality by enriching it with minerals and slightly increasing its alkalinity. Their porous structure also gives them mild antibacterial properties, making them effective in enhancing both water safety and nutritional value.
