The main gate silver paste is a material used to manufacture the main gate electrodes of thin film transistors (TFTs). In flat display technologies such as TFT liquid crystal displays (LCDs) and organic light emitting diodes (OLEDs), the main gate silver paste is widely used in the preparation process of the main gate electrode. The main gate electrode is a key component in TFT, playing an important role in controlling the arrangement of liquid crystal molecules and regulating electron flow. The main gate silver slurry is usually composed of conductive particles, stabilizers, and solvents. Silver particles are the core component of the main gate silver slurry, with good conductivity and light reflection, enabling efficient electron transfer and optical effects.
