Corn bran is a food made from the hard outer layer of corn that is very high in fiber. The bran is a hard outer shell that protects the grain, which is usually made up of three parts: the bran, endosperm, and germ. Bran is often used as an ingredient to increase the fiber content of foods during grain processing, or as a filler in commercial foods to reduce calories. In addition, corn bran is low in carbohydrates, making it suitable for people who want to reduce carbohydrate intake in their foods.

Market drivers

The driving factors of the corn bran market mainly include:

Healthy diet trend: As people pay more attention to healthy diet, high-fiber, low-calorie foods are becoming more and more popular. Corn bran, as a natural high-fiber food raw material, meets this market demand.

Demand from the feed industry: In the feed industry, corn bran is often used as a filling raw material. With the growth of the domestic breeding industry, the demand for feed raw materials is also increasing, which has promoted the development of the corn bran market.

Policy support: Some countries may introduce policies to encourage the comprehensive utilization of agricultural waste, including the processing and sales of by-products such as corn bran. These policies provide strong support for the development of the corn bran market.

Technological innovation: With the continuous advancement of processing technology, the processing efficiency and product quality of corn bran have been improved, which helps to expand its market application scope.
