The report requires updating with new data and is sent in 48 hours after order is placed.

In this report, LP Information studies the present scenario (with the base year being 2017) and the growth prospects of global MALE UAV Flight Training and Simulation market for 2018-2023.

MALE means medium-altitude long-endurance. Unmanned aerial system (UAV) flight training and simulation can be defined as a simulation of the operation of a real-world system or process related with UAV flight training. These systems simplify pilots to train in an artificial environment that prepare them to obtain skillsets required to gain hands-on experience for real-time situations without the risks associated with actual flights. Beside the MALE UAV, there also should be HALE and LALE UVA.

These systems facilitate pilots to train in an artificial environment that enables them to obtain skillsets required to gain hands-on experience for real-time situations without the risks associated with actual flights.

Rise in need for virtual simulation solutions, growth in need for commercial drone market, and increased application areas for drones drive the global UAV flight training and simulation market. However, increased adoption of automated UAVs, lack of awareness among end-users, and limited forward field-of-view impedes the market growth. Supportive regulatory framework offers a major opportunity for market expansion.

Over the next five years, LPI(LP Information) projects that MALE UAV Flight Training and Simulation will register a xx% CAGR in terms of revenue, reach US\$ xx million by 2023, from US\$ xx million in 2017.
