Male Wirable Connectors are types of electrical connectors specifically designed for creating secure and reliable electrical connections by wiring directly to the connector. These connectors have male pins or contacts that plug into corresponding female connectors, forming a connection.

External thread joints are constantly developing towards high precision, high strength, and high sealing performance. For example, special types of external threaded joints such as high-strength external threaded joints, high-pressure external threaded joints, and quick external threaded joints are constantly innovating and developing. They are easy to operate, fast to seal, pressure-resistant, high-temperature resistant, low-temperature resistant, wear-resistant, and durable. The advantages are becoming more and more prominent.
