The global Mammalian Cell Expression System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Mammalian cell expression system is a type of recombinant protein expression system that uses genetically modified mammalian cells to produce large amounts of specific proteins. Mammalian cells are a popular choice for protein expression because they have the ability to perform post-translational modifications such as glycosylation, phosphorylation, and disulfide bond formation, which are important for the biological activity and stability of many proteins. Mammalian cell expression systems are widely used in the production of recombinant proteins for research, therapeutic, and industrial applications. They offer high protein expression levels, produce proteins with correct post-translational modifications, and are suitable for the production of complex and difficult-to-express proteins.

Pet medical care is the second largest segment in pet industry. In the UK, annual spending on veterinary and other pet services has risen from ?2.6bn in 2015 to ?4bn in 2021, a 54% increase in just six years. According to Vetnosis, the value of the global animal health industry will increase by 12% to \$38.3 billion in 2021. White Paper on China's Pet Healthy Consumption of JD shows that in 2023, there are 13.09 million pets entering middle age and old age. And pet aging is expected to be seen in the next few years. Changes in the age structure of pets will further bring about the development of the pet medical industry. According to the data of the 2022 China Pet Medical Industry White Paper, from the perspective of market size, the scale of China's pet medical market is about ?67.5 billion, accounting for about 22.5% of the entire pet industry. From the perspective of hospital operation time, pet hospitals within 5 years accounted

for about 73%. About 11% of the pet hospitals have been in operation for more than 10 years. From the perspective of hospital turnover, nearly 40% of the hospitals have increased their annual turnover year-on-year, and the growth rate is mainly within 314%.
