The global Managed PDU (Power Distribution Unit) market size is predicted to grow from US\$ 4117 million in 2025 to US\$ 8853 million in 2032; it is expected to grow at a CAGR of 11.6% from 2026 to 2032.

A Managed PDU (Power Distribution Unit) is an intelligent power distribution device used in data centers and IT environments. Compared with a basic PDU, it provides network-based management capabilities, enabling remote monitoring and control of power usage. It distributes electrical power from a UPS or main supply to multiple IT devices (such as servers and networking equipment) while offering real-time visibility into metrics like current, voltage, power consumption, and energy usage, as well as remote outlet switching, load balancing, and alert functions. In 2025, global Managed PDU production reached approximately 10.02 M units, with an average global market price of around US\$ 420 per unit. Annual production capacity is 11.3 M units. Gross Profit Margin: 38%. The Managed PDU industry chain is structured around upstream electrical components, midstream system integrators, and downstream data center and IT infrastructure operators. Upstream suppliers provide critical materials such as copper conductors, circuit breakers, sensors, and network communication modules. Midstream manufacturers such as Schneider Electric, Eaton, Vertiv, and Delta design and assemble intelligent rack PDUs by integrating power distribution, monitoring, and remote control technologies. Downstream demand is driven primarily by hyperscale data centers, cloud service providers, telecom operators, and enterprise IT facilities, where high reliability, energy efficiency, and remote power management are essential. Managed PDUs are shifting from a basic infrastructure component to a critical intelligence layer in modern data centers. The rapid growth of AI workloads and high-density computing is increasing demand for real-time power monitoring and outlet-level control. In my view, the key value driver of this product is no longer just power

distribution, but data visibility and energy optimization. As power density continues to rise, Managed PDUs will become deeply integrated with digital power ecosystems, making them a small but strategically important component in the future AI-driven infrastructure stack.

United States market for Managed PDU (Power Distribution Unit) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
