The global Manganese Oxide Curing Agent market size is predicted to grow from US$ 317 million in 2025 to US$ 443 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

Manganese Oxide Curing Agent is a curing accelerator and crosslinking catalyst primarily used in elastomer and rubber compounding, especially for halogenated elastomers like Chloroprene Rubber and Chlorobutyl Rubber. It functions by promoting dehydrohalogenation and facilitating the formation of crosslinks during vulcanization, thereby improving heat resistance, tensile strength, and aging stability of the final rubber products. Its supply chain starts with the mining and refining of Manganese Ore into high-purity Manganese Oxide (MnO2), which is then micronized or surface-treated for enhanced reactivity. Producers of manganese oxide (often in China, India, and South Africa) supply this raw material to specialty chemical formulators who blend it into curing systems, which are then distributed to rubber compounders, tire manufacturers, and industrial goods producers for end-use applications. The unit price ranges from USD 2,800 to 4,500 per ton depending on technical versus high-purity grades; annual production is around 85,000 tons, supported by a global production capacity of about 110,000 tons per year, with an average gross margin of approximately 27%.

United States market for Manganese Oxide Curing Agent is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Manganese Oxide Curing Agent is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
