The global Manganese Steel Casting market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Manganese steel castings are castings made of alloy steel materials containing a higher manganese content. Manganese steel has high hardness and wear resistance. By adding manganese element, the strength, toughness and wear resistance of steel can be significantly improved.

Manganese steel castings have high hardness, good wear resistance, good toughness and impact resistance, and are widely used. When manufacturing and using manganese steel castings, it is necessary to select the appropriate manganese content and casting process according to specific requirements to ensure that they meet the needs of the working environment, and follow the corresponding standards and specifications for processing and use.
