The global Manual Attenuators market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Manual attenuators generally consist of a variable resistor or a set of fixed resistors that can be switched in or out to achieve different levels of attenuation. By adjusting the resistance, the signal passing through the attenuator encounters a greater resistance, resulting in a reduction in amplitude.

Manual attenuators, also known as adjustable attenuators, are electronic devices used to reduce the power or amplitude of a signal. They are typically used in various applications, such as telecommunications, audio systems, radio frequency (RF) testing, and signal processing.
