Manual linear translation stages are precision mechanical platforms that allow controlled movement along a single linear axis through manual adjustment, typically using micrometer heads, lead screws, or thumbscrews. These stages are designed for applications that require accurate, repeatable positioning without the need for motorized automation. Constructed with durable materials and low-friction guides such as dovetail slides, ball bearings, or crossed roller bearings, they offer varying levels of load capacity and travel range. Manual linear stages are widely used in optics, metrology, microscopy, and research labs for aligning components, samples, or instruments with high stability and fine positional control.
