The global Manual Metal Arc (MMA) Welding Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The MMA welding machine generates high temperature through arc discharge, which melts the welding core and workpiece of the electrode (electrode) to form a weld. The MMA welding machine provides the required current and voltage to form a stable arc between the welding core of the electrode and the workpiece. When the welding core melts, the resulting metal droplets form a weld bead on the surface of the workpiece. MMA welding machines are suitable for a variety of welding materials, including steel, stainless steel, cast iron, etc. It is characterized by simple operation and is suitable for various working environments and welding positions, such as repair, installation, fabrication and maintenance work. MMA welding machines are widely used in construction, ships, bridges, petrochemical, metal processing and other industries.
