A manual pipette controller is a hand - operated device used in laboratory settings to accurately and precisely control the aspiration and dispensing of liquids with a pipette. It typically consists of a handle or trigger mechanism that allows the user to regulate the flow rate of the liquid through the pipette. The controller is designed to fit different types and sizes of pipettes, enabling users to transfer various volumes of liquids, from very small amounts for delicate experiments to larger volumes for routine laboratory tasks. It provides a more controlled and efficient alternative to manually pipetting by mouth, enhancing accuracy, safety, and ease of use in the laboratory.
