A manual rotary indexing table is a device used in machining operations to rotate a workpiece or tool to specific angles or positions. It consists of a circular table with evenly spaced holes or slots around its circumference. The table can be manually rotated by hand or using a handle, allowing for precise positioning of the workpiece or tool.

The indexing table typically has a locking mechanism that holds it securely in place once the desired angle or position is reached. This allows for accurate and repeatable machining operations, such as drilling, milling, or grinding, at different angles or positions.

Manual rotary indexing tables are commonly used in small-scale machining operations or in situations where automated indexing systems are not necessary or cost-effective. They are often found in workshops, toolrooms, or small manufacturing facilities.
