The global Manual Sit-Stand Desks market size is predicted to grow from US\$ 363 million in 2025 to US\$ 496 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

A manual sit-stand desk is an adjustable-height workstation that allows users to switch between sitting and standing positions manually, typically using a hand crank or mechanical lever. It is designed to promote better posture, reduce sedentary behavior, and enhance comfort and productivity in office or home environments. Unlike electric sit-stand desks, these desks do not require power, offering a cost-effective and reliable solution for ergonomic work setups. Manual sit-stand desks are projected to sell 4.61 million units by 2025, with an average selling price of \$80 per unit. Single-line production capacity is 10,000 units per year, with a gross margin of 25%-50%.

The upstream of manual sit-stand desks consists of a diverse range of suppliers providing raw materials and components such as high-quality steel for frames, engineered wood or composite panels for desktops, mechanical lifting systems, hand cranks, and ergonomic accessories like anti-fatigue mats and cable management solutions. Other upstream contributors include coating and finishing suppliers, fasteners, and packaging material providers. The manufacturing process typically involves precision cutting and welding of frames, assembly of lift mechanisms, surface finishing, quality control testing, and final packaging. Advanced factories may also integrate modular design to facilitate mass customization. Downstream, the desks are distributed through multiple channels, including office furniture wholesalers, specialized ergonomic retailers, e-commerce platforms, and B2B corporate procurement. End users span corporate offices, co-working spaces, home offices, and educational institutions. The product targets customers seeking improved posture, reduced sedentary time, and

enhanced productivity, with growing awareness of ergonomic health driving market demand.
