The global Manual Tray Sealing Equipment market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Manual Tray Sealing Equipment are devices used to seal food trays or containers manually. They are typically used in smaller-scale food production or packaging operations.

These Equipment consist of a base or frame with a tray sealing mechanism and a heating element. The operator manually places the food tray or container onto the sealing area, aligning it with the heating element. The operator then presses down on the sealing mechanism, which applies pressure and heat to the tray, sealing it securely.

Manual tray sealing machines may have an adjustable temperature control to ensure proper sealing of different types of packaging materials, such as plastic or aluminum trays. Some models may also have a cutting or trimming feature to remove excess material from the sealed edges. These machines are often used for packaging perishable food items, such as pre-cooked meals, salad bowls, or deli items. They provide a cost-effective and efficient way to seal food trays, maintaining the freshness and quality of the food inside and extending its shelf life. It's important to note that manual tray sealing machines are not suitable for high-volume production or industrial-scale operations. For larger-scale operations, automated or semi-automated tray sealing machines are typically used.
