Abstracts

According to this study, the global Map-free Pure Vision Intelligent Driving System market size will reach US$ 34670 million by 2031.

There are two types of autonomous driving routes. One is based on high-precision maps, but the coverage of high-precision maps only accounts for about 6% of the national highway mileage, which means that about 94% of the national highway sections cannot achieve intelligent driving. The other map-free method does not rely on high-precision maps, but relies more on sensors such as radars and cameras equipped on vehicles. Within the navigation coverage area, autonomous driving can be achieved on urban main roads, expressways, narrow streets and country roads. The map-free pure visual intelligent driving system can accurately predict the behavior of other traffic participants through real-time tracking, intention recognition and trajectory prediction of dynamic traffic objects, as well as a command brain that is coordinated by data-driven and expert rules.

United States market for Map-free Pure Vision Intelligent Driving System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Map-free Pure Vision Intelligent Driving System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
