Abstracts

The global MAP Thermoforming Packaging Machine market size is predicted to grow from US$ 744 million in 2025 to US$ 1244 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

In 2024, the global production of MAP thermoforming packaging machines reached 12,500 units, with an average price of 58,000 USD per unit, a production capacity of 15,000 units, and a gross margin of 28%.

MAP thermoforming packaging machines are automated systems that heat and deep-draw flexible or rigid plastic films into trays, then perform vacuum extraction, modified-atmosphere gas flushing and sealing within the same unit. They are widely used for fresh meat, poultry, seafood, cheese and ready-to-eat foods where extended shelf life is required. The machines ensure consistent tray forming, stable gas composition and longer freshness, making them suitable for large-scale food processors, retail chains and central kitchens.

Upstream for MAP thermoforming packaging machines includes plastic multilayer films (PA/PE, PET/PE, PP), vacuum pumps, gas-mixing systems, control units, heating modules and stainless-steel frames, which directly determine forming depth, vacuum quality and gas accuracy. Midstream manufacturers handle machine design, forming units, vacuum modules, gas-mixing controls and sealing systems integration. Downstream demand comes from meat processors, seafood processors, dairy plants, ready-meal producers, central kitchens and large-scale food packaging OEMs, driven by automation upgrades, stricter shelf-life requirements and expanded modern retail supply chains.
