Abstracts

According to this study, the global Marine 3D Laser Scanning Services market size will reach US$ 1116 million by 2031.

Marine 3D laser scanning service is a professional surveying and mapping service that uses shipborne/airborne laser radar (LiDAR) combined with multi-beam sonar technology to perform high-precision three-dimensional modeling of underwater terrain, nearshore landforms and offshore facilities. Through blue-green laser (which can penetrate water bodies) and point cloud data processing, it generates centimeter-level accurate seabed digital elevation models (DEM), coral reef distribution maps or oil and gas pipeline three-dimensional models, which are widely used in marine surveying and mapping, port engineering, offshore wind power, archaeology and national defense. Compared with traditional sonar, it has integrated scanning capabilities above the water surface (such as bridges) and underwater (?50 meters), and its efficiency is increased by 3-5 times.

United States market for Marine 3D Laser Scanning Services is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Marine 3D Laser Scanning Services is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
