In 2025, global production of marine ceilings reached 15.28 million square meters, with an average selling price of US\$34 per square meter. Marine ceilings are the top enclosure and decorative modules in the interior systems of living areas, public areas, or control areas of ships and offshore engineering facilities. They are mainly used to separate compartments, cover pipes, cables, ventilation ducts, and steel frames, etc. While meeting aesthetic requirements, they also possess key performance indicators such as fire resistance, sound insulation, waterproofing, and moisture resistance. They are mainly used in passenger areas, public areas, crew areas, corridors, cabins, external areas of sanitary units, control rooms, some engine room auxiliary spaces, and offshore engineering accommodation modules. The upstream of the industry chain includes raw materials such as galvanized steel sheets, stainless steel sheets, rock wool, calcium silicate, and aluminum profiles; the midstream consists of ceiling manufacturers and interior system integrators; and the downstream serves various shipbuilding companies, with applications covering multiple ship types including luxury cruise ships, ro-ro passenger ships, cargo ships, warships, offshore drilling platforms, and marine engineering facilities. Gross profit margins range from approximately 15% to 30%.
