The deck coating of a ship is suitable for waterproofing the surface of a ship or the sea. There are two main types of deck coatings: solvent-based Coatings and water-based coatings. A solvent-based coating is a liquid protective coating consisting primarily of organic compounds that is applied to the surface of a material to prevent corrosion. Solvent-based coatings are generally more resilient than water-based coatings during the curing process. Water-based coatings include water-soluble coatings, water-diluted coatings, water-dispersed coatings (latex coatings)3 kinds. Water-soluble coatings are based on water-soluble resins as film-forming materials, such as water-soluble alkyd resins, water-soluble epoxy resins, Inorganic polymer water-soluble resins, etc.
