The global Marine Eductor market size is predicted to grow from US\$ 552 million in 2025 to US\$ 863 million in 2032; it is expected to grow at a CAGR of 7.2% from 2026 to 2032.

In 2025, global Marine Eductors approximately 172,241 units, with an average global market price of around US\$ 3,274 per unit. Gross margin is about 44%. The cost is 1,833 usd. The Production is about 200,000 units. Marine Eductor is a jet-operated pumping device used on ships and offshore vessels to create suction for stripping, draining, and transferring liquids—such as ballast water, bilge water, cargo residues, or tank washings—by using a high-velocity motive fluid instead of mechanical moving parts. Upstream, marine eductors rely on precision venturi/nozzle design, marine-grade materials (bronze, stainless steel, Cu-Ni, duplex steel), casting and machining processes, and ship-class–approved piping and valve components. Downstream, they are widely installed in cargo handling systems, ballast water systems, bilge and stripping systems, and tank cleaning operations on oil tankers, chemical carriers, bulk carriers, LNG vessels, and offshore platforms, where reliability, simplicity, and low maintenance under harsh marine conditions are critical.

United States market for Marine Eductor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Marine Eductor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
