Marine engine monitoring systems can monitor various auxiliary equipment of the engine to provide information that customers can use to reduce overall costs. Whenever the machinery on board or equipment fails, subsequent repairs are called fault maintenance. However, due to limited offshore resources, this maintenance is not recommended unless the equipment is critical. Preventive maintenance includes irregular lubrication, cleaning, and inspections to maintain the health of the equipment, which depends on trend values and related analysis. Marine engine monitoring systems can help improve ship operating conditions.
