A marine engine transmission couples all the torque a large diesel or gas engine can provide to the shaft that rotates the propeller. A marine engine transmission can withstand tens of thousands of shifts from neutral to in-gear, as well as reverse rotation, over its lifespan, so it must be built with clockwork precision. To combine with the latest electro-hydraulic computer drive technology, premium marine gears are listed as one of the most complex gears a boatman will own. Naturally, marine engine transmissions have to function properly in a hot-salt corrosive steam bath in the engine room.

The global market for Marine Engine Transmissions is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Marine Engine Transmissions market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Marine Engine Transmissions market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The Europe Marine Engine Transmissions market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The China Marine Engine Transmissions market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

Global key Marine Engine Transmissions players cover ZF, Rolls-Royce, Twin Disc, Velvet Drive and Allison, etc. In terms of revenue, the global largest two companies occupy a share nearly % in 2021.
