The global Marine Exhaust Gas Purification Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The marine exhaust gas purification system is a device specially designed to reduce pollutants emitted by ship engines. The system effectively reduces sulfur oxides (SO_x), nitrogen oxides (NO_x), particulate matter and other harmful substances in the exhaust through technologies such as catalytic conversion, particle capture, or exhaust gas recirculation to meet the environmental protection standards set by the International Maritime Organization (IMO) and other organizations. The exhaust gas purification system helps reduce the impact of ships on the atmospheric environment, improve the air quality in marine and port areas, and promote the sustainable development of the shipping industry.
