The global Marine Fireproof Doors market size is predicted to grow from US\$ 937 million in 2025 to US\$ 1239 million in 2031; it is expected to grow at a CAGR of 4.8% from 2025 to 2031.

Marine fireproof door is a kind of ship accessories, which refers to the fire door used by ships. Marine fireproof doors are mainly cabin fire doors on ships. Marine fireproof doors are made of fire-resistant and heat-insulating materials, which can effectively avoid casualties. In different grades of fire doors, A60 means that the insulating material can be burned for 60 minutes on one side, the temperature on the other side does not exceed 150 degrees, and does not emit harmful smoke. Usually the steel wall is covered with rock wool.

The growth of the global marine doors market can be attributed to the rising demand for doors for civilian as well as military vessels across the globe. In addition, increasing maritime trade and increasing investments in new shipbuilding projects are also factors driving the growth of this market. The aluminum doors segment is expected to register a higher CAGR than the steel doors segment during the forecast period due to its properties such as light weight and corrosion resistance making it suitable for use on civil vessels. The North America marine doors market is driven by several factors such as increasing production of recreational boats, growing demand for luxury yachts, and increasing number of cruise ships. Furthermore, technological advancements such as integrated systems, automation, and advanced materials for the production of marine doors are expected to drive the growth of the market over the forecast period. The Asia Pacific marine doors market is expected to expand at an impressive growth rate over

the forecast period. The key drivers for the growth of this market are rising demand for luxury and recreational vessels, increasing government investment in the marine industry, and rising demand for efficient and durable marine doors.
