The global Marine Flexible Coupling market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A marine flexible coupling, also known simply as a flexible coupling or marine coupling, is a mechanical device used in marine propulsion systems to connect two shafts together while compensating for misalignment, vibration, and shock loads. These couplings are commonly used in boats, ships, and other marine vessels to transmit torque from the engine to the propeller shaft while allowing for some degree of flexibility and movement between the two shafts.

The global marine industry, including commercial shipping, offshore oil and gas, and recreational boating, was witnessing growth. This growth was driving the demand for marine propulsion components, including flexible couplings.
