The global Marine Hybrid Turbocharger market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Marine Hybrid Turbocharger is a turbocharger that is designed to be used in hybrid propulsion systems on marine vessels. It combines a conventional turbocharger with an electric motor that can assist the engine and reduce fuel consumption and emissions. The electric motor can operate independently or in tandem with the turbocharger to provide boost and reduce turbo lag. Marine Hybrid Turbochargers are becoming increasingly popular as a way to improve the efficiency and environmental sustainability of marine vessels.

To meet the demands of the market, there is an increasing trend of collaboration between different manufacturers of turbochargers, electric motors, and other related components. Marine Hybrid Turbochargers are being integrated with other systems such as energy storage systems, power management systems, and control systems to improve their performance.
