The global Marine LNG Fuel Gas Supply System (FGSS) market size is predicted to grow from US\$ 1535 million in 2025 to US\$ 5559 million in 2032; it is expected to grow at a CAGR of 20.6% from 2026 to 2032.

In 2024, global orders for marine LNG fuel supply systems reached 46 units, with an average selling price of US\$26 million per unit.

The marine LNG fuel supply system is a core system for liquefied natural gas (LNG)-powered vessels. It safely converts cryogenic liquid LNG into a gaseous fuel suitable for engine use. The system converts LNG and BOG stored in the vessel's tanks into fuel for the engines. The fuel supply system consists of LNG fuel tanks, an LNG pumping system, a BOG compression system, an LNG heating system, a BOG heating (cooling) system, a heat transfer system, a bunkering system, and an exhaust system.

LNG fuel supply systems (FGSS), as a crucial component of liquefied natural gas (LNG) applications, have garnered widespread attention in recent years, particularly in shipping and other energy-intensive sectors. With the advancement of global environmental policies and the growing demand for clean energy, LNG, as a low-carbon, efficient, and clean energy source, has become a key alternative to traditional oil and coal.

Regarding the current market situation, LNG-FGSS have become standard equipment on many large ships, particularly LNG-powered vessels, providing an efficient and reliable energy supply system. With the IMO (International Maritime Organization) tightening global ship emission standards, the shipping industry is gradually transitioning to clean energy, and LNG has gained widespread use as a primary fuel for

ships. In the industrial sector, particularly in heavy industrial facilities such as large power plants and steel mills, FGSS, as a crucial component of providing clean natural gas, are gradually replacing traditional coal- and oil-based fuels, helping companies achieve environmental protection and energy conservation goals.

In terms of future development trends, the LNG-FGSS market is expected to continue its growth momentum. First, with the global energy transition, more and more countries and regions are introducing stricter environmental standards, which will continue to drive demand for LNG. Energy-consuming countries, particularly in the Asia-Pacific region, Europe, and North America, will gradually increase their investment in clean energy technologies, and LNG fuel supply systems will become a mainstream solution in the future energy sector.

Secondly, with continuous technological advancements, FGSS system designs will become more intelligent and automated. Efficient vaporizers, LNG storage technologies, and innovations in pipeline systems will further enhance the safety, stability, and efficiency of LNG fuel supply systems. Furthermore, as LNG production technology matures, the cost of LNG production will gradually decrease, further driving the adoption of the FGSS market.

Furthermore, with the global adoption of LNG as a clean fuel, the shipping industry, particularly in ocean-going shipping, is expected to see a significant increase in demand for LNG-powered vessels. Over the next few years, it is expected that an increasing number of LNG fuel supply systems will be installed in newbuildings and retrofitted to existing vessels. To meet this demand, LNG-FGSS manufacturers will continue to innovate and launch more advanced and reliable solutions.
