The global Marine Magnetic Tachometer market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The working principle of the marine magnetic tachometer is mainly based on the balance of magnetic force and mechanical force. When the shaft of the measured engine rotates, it will drive the magnetic element to generate a rotating magnetic field. This rotating magnetic field induces eddy currents on the metal cap, which in turn produces a torque change proportional to the speed. This torque change will drive the pointer to deflect, thereby indicating the current speed value.
