The global Marine Maintenance Service market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

The market is primarily driven by the increasing demand for efficient and reliable maintenance services for ships and vessels.

The growing focus of governments and private organizations on maritime safety and security is also propelling the growth of the market. Furthermore, the rising number of commercial and recreational vessels, coupled with the growing need for regular maintenance and repair, is driving the demand for marine maintenance services.

However, the lack of skilled personnel and the high cost associated with marine maintenance services are key factors that may hinder the growth of the market. In addition, the increase in environmental regulations and the growing concerns over marine pollution have led to the adoption of eco-friendly maintenance and repair techniques, which may also pose a challenge to the growth of the market.
