The global Marine Medium Voltage Switchboard market size is predicted to grow from US\$ 377 million in 2025 to US\$ 588 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

In 2025, global production of marine medium voltage switchboards reached 2,470 units, with an average selling price of US\$156,000 per unit. Marine medium voltage switchboards are core power distribution, control, and protection equipment used in medium-voltage power systems of ships and offshore engineering platforms. They are typically suitable for marine AC power distribution networks of 3.3kV, 6.6kV, 11kV, 12kV, 15kV, or 17.5kV, and are responsible for functions such as generator grid connection, busbar segmentation, propulsion load power supply, transformer power supply, high-power pump/propeller/compressor power supply, shore power access, and fault protection. They generally consist of a metal-enclosed cabinet, busbar system, vacuum circuit breaker or gas-insulated switch, grounding switch, protective relay, measuring instruments, instrument transformer, interlocking mechanism, arc flash protection, communication interface, and control and protection units approved by classification societies. They are mainly used in large merchant ships, LNG carriers, large container ships, cruise ships, ro-ro passenger ships, offshore engineering platforms, offshore wind power installation vessels, engineering vessels, icebreakers, naval vessels, electric propulsion vessels, and high-voltage shore power systems. The upstream products include copper busbars, circuit breakers, protective relays, instrument transformers, insulation components, cabinet materials, and control and communication modules. Downstream customers include shipyards, ship owners, offshore platforms, port shore power projects, electric propulsion system integrators, and naval vessel projects. The gross profit margin is approximately 25%-45%.
